

Systems Plus™ Programmer / Controller

Systems Plus™ Programmer / Controller

Standard in all Envirotronics standard and custom chambers, the Systems Plus™ Programmer/Controller incorporates numerous timesaving features without sacrificing ease-of-use and precise control.

Fuzzy Logic

Fuzzy logic control eliminates costly and time-consuming operator set up of traditional P.I.D. control parameters.

User-Friendly Programming Sequence

Our user-friendly programming sequence requires minimal time for actual system programming. The built-in floppy disk drive allows you to save program information and data for quick retrieval.

On-Board Diagnostics and Maintenance Logs

The on-board diagnostics features can save costly troubleshooting time. Our alarm screen pinpoints a tripped safety switch. Additionally, you can keep track of actual run times on active components by utilizing the on-board maintenance logs. This allows you to structure a maintenance program based on past history and may help to reduce or eliminate unforeseen repairs.

Simplified Procedures

We have incorporated simplified calibration and upgrading features into the Systems Plus™. These reduce the amount of time you need to spend calibrating your equipment or upgrading the system.

Optional Data Logging

The optional data logging feature can eliminate the need for a circular chart recorder, reducing initial expenditures while providing more accurate test documentation.

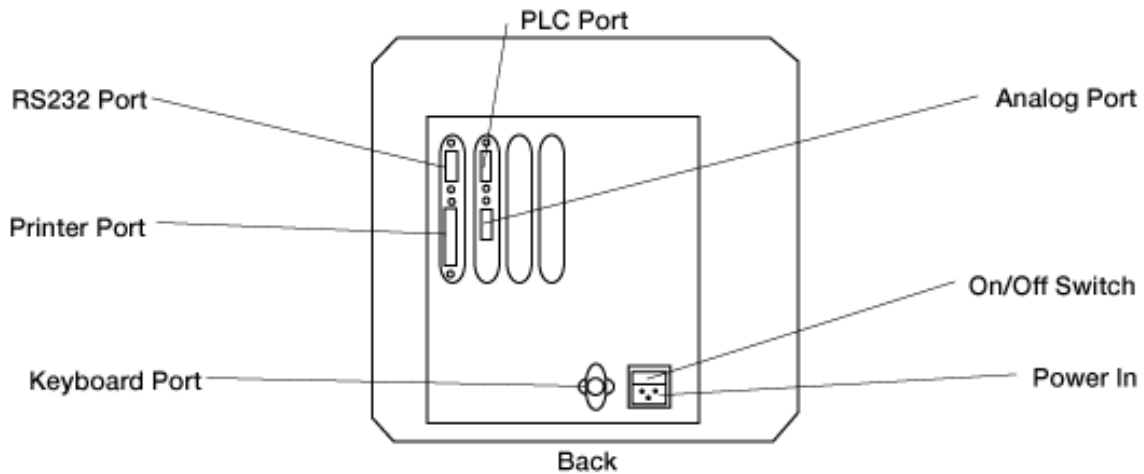

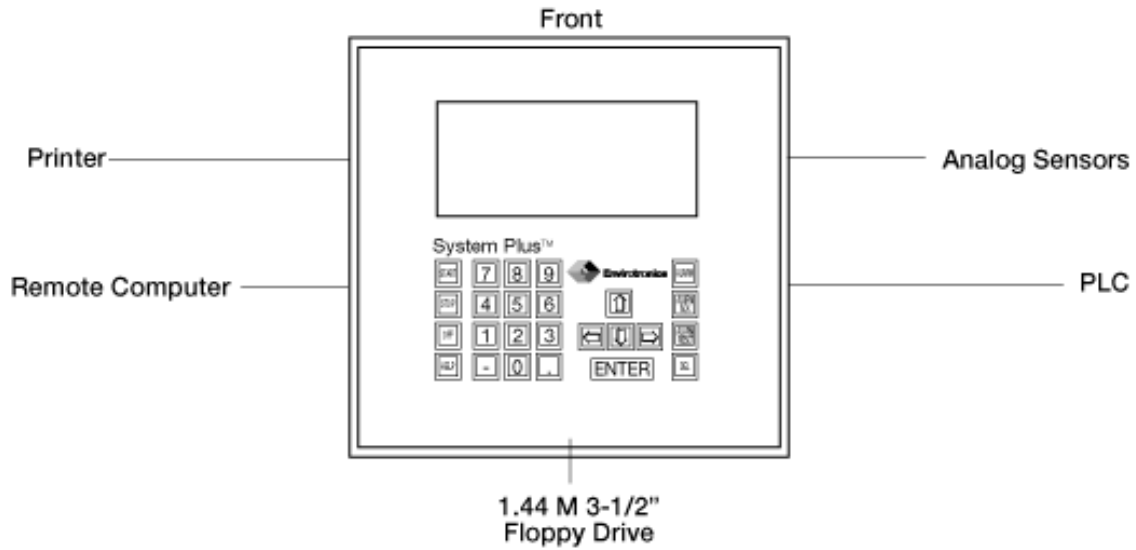

Built-in User Manual

Two integral timesaving features of Systems Plus™ are the built-in user manual and the “help” screen. These components reduce training time and provide user assistance at every step within programming, calibration, and setup modes.

Security

Password protection is provided to prevent unauthorized entry. This eliminates costly program reentry due to accidental erasure or tampering.
